AGUA GAMES · MUSEUM SUITE SERVICE

MUSA

Complete digital presence for museums.

From searchable catalog to digital twin — the kind of experience only the world's great museums have today, delivered as a service.

DECK FOR PARTNERS AND INVESTORS · OCTOBER 2026

01 — THE PROBLEM

Valuable collections.
No digital presence.

Agencies

charge heavily for a website that ages — and dies.

Generic platforms

don't understand collections: catalog records, image licensing, object tiers.

Bespoke projects

don't scale — every museum becomes a brand-new development, from scratch.

The result: thousands of museums invisible to the digital public.

02 — THE SOLUTION

A complete digital museum, operated by us.

The experience is centralized. The content belongs entirely to the museum.

Website + searchable catalog

a new piece goes from the curator's panel to live in seconds

Interactive 3D

objects spinnable on the visitor's own phone

AI assistant

knows every piece and answers citing the official record as source

Store, cinema & digital twin

depending on the plan — including the physical museum's kiosks

03 — PROOF, NOT PROMISE

The product is live — and measured.

36 s

median time for a new piece to go from the curator's panel to the public site

455

records published in the demo museum catalog — each with public license and source

AA

WCAG AA accessibility and LGPD compliance from day one

See it live: agua-games.github.io/DemoMuseum

numbers measured on the real product · October 2026

04 — BUSINESS MODEL

Monthly subscription, per museum.

	BRONZE	SILVER	GOLD
monthly	R$ 597	R$ 1,197	R$ 3,197
includes	complete digital museum — website, searchable catalog and curator panel	everything in Bronze, plus interactive 3D and the AI assistant	everything in Silver, plus the whole museum mirrored online — digital twin and kiosks
fit	first digital step	interactive experience	digital flagship

Add-on modules: AI assistant · online store · art-cinema streaming · extended digital twin · data API · multilingual layer

The museum contracts its own cloud infrastructure — cents at a typical collection's scale. That is what keeps our marginal cost per museum near zero.

05 — WHY MUSA

Defensible by design — not by secrecy.

The collection belongs to the museum

open, documented format with full export at any time — the opposite of the data lock-in the sector fears

Centralized operations

a new museum goes live in days, not months — and plan changes take effect immediately

Compliance from day one

LGPD (the museum is the data controller, we are the operator), WCAG AA accessibility, and artwork licenses shown on every record

Auditable quality

every release passes an automated test gate with a misuse battery — we simulate a client doing everything wrong to prove nothing is lost

The Milkmaid — demo museum collection

3,902

museums mapped in Brazil — Museus BR / Ibram platform, 2024

The vast majority are small and mid-sized, with no technical staff —
exactly who MUSA serves.

And the pattern repeats worldwide: valuable collections, precarious digital presence.

07 — ROADMAP

From demo museum to a network of museums.

TODAY

public demo museum live — catalog, 3D, AI assistant and curator panel, demonstrable in a 5-minute session

NEXT STEP

first customer museum in production

SCALE

certified 3D-scanning partner network — dozens of museums on the same operation

Every new museum goes live in days — not months.

08 — WHAT WE'RE LOOKING FOR

Shall we put the whole museum *online*?

- → Seed investment or incubator partnership
- → A pilot museum for the first case study
- → 3D-scanning partners
